Introduction

The Bayer Crop Science Logistics control tower solution is a part of their inbound and outbound Supply Chain operations, Visibility & Data Program that aims at enabling a connected core of internal and external data for Global Operations in partnership with One Network. The solution will digitalize the segregated process of using different tools, software and provide end-to-end order and shipment visibility to all the stakeholders of the transactions.

The process would start from finding an eligible order, creating a parent point to point shipment against the order, getting the shipment booking with the LSPs/Suppliers freight forwarders and finally generating the shipment legs and storing the container details against the shipments (if applicable).

Shipment tracking information will be retrieved from multiple sources, including those of Suppliers and In-Country LSPs to ensure visibility across all shipment legs; with the existing FourKites integrations being linked through to ONE for a true single version of the truth across all operational phases. The events will be used to generate ETAs (Estimated Time of Arrival) for deliveries based on the information provided by the source of data.

Additionally, ONE would also provide Alerting, Reporting, Milestones, Problem management and Dashboard capabilities that would give users actionable information and insights.
